Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C;Superfamily: glutathione transferase
C;Keywords: dimer; transferase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A;Description: catalyzes the nucleophilic conjugation of intracellular glutathione A;Pathway: detoxification; xenobiotics metabolism A;Note: increased hydrophilicity of GSH-conjugates facilitates their further metabolism
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A; Molecule type: protein
A; Residues: 1-17 < ROU>
A; Experimental source: liver; cytosolic
C; Comment: At least five species-independent classes of cytosolic
s mitochondrial form are known.
C; Complex: dimer
C; Function:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     glutathione transferase (EC 2.5.1.18) class alpha 6a - pig (fragment) N;Alternate names: glutathione S-transferase class alpha 6a C;Species: Sus scrofa domestica (domestic pig) C;Date: 19-Mar-1998 #sequence_revision 17-Apr-1998 #text_change 07-May-1999 C;Accession: S71864 R;Rouimi, P.; Anglade, P.; Debrauwer, L.; Tulliez, J.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Biochem. J. Blochem. 248:99-103(1997).

-!- FUNCTION: THIS IS THE HEME A-CONTAINING CHAIN OF CYTOCHROME C OXIDASE, THE TERMINAL OXIDASE IN MITOCHONDRIAL ELECTRON TRANSPORT.
-!- CATALYTIC ACTIVITY: 4 FERROCYTOCHROME C + O(2) = 2 H(2)O + 4 FERRICYTOCHROME C.
-!- SUBCELLULAR LOCATION: MITOCHONDRIAL INNER MEMBRANE.
-!- SUBCELLULAR LOCATION: MITOCHONDRIAL INNER MEMBRANE.
-!- SIMILARITY: BELLONGS TO THE CYTOCHROME C OXIDASE VA FAMILY.
OXIOCREDUCTS: Heme; Mitochondrion; Inner membrane.

Gen. Genet. 232:284-294(1992).
FUNCTION: REQUIRED FOR COENZYME PYRROLO-QUINOLINE-QUINONE (PQO)
BIOSYNPHESIS. THIS PROTEIN COULD FUNCTION AS A TEMPLATE FOR PQO
SYNTHESIS AND PROVIDE THE GLUTAMATE AND TYROSINE RESIDUES WHICH
ARE NECESSARY FOR THE SYNTHESIS.
SIMILARITY: TO OTHER BACTERIAL PQOA.
